For many gardeners, August is the time for finding ways to enjoy plants in the shade. Particularly in hot weather, flowers start taking a back seat to fruits, and while we traditionally associate autumn with fruits (apples, hawthorns, mountain ash, etc.), there are plenty of fruits that ripen in summer to keep us occupied on a shady walk in August. High on my list of summer fruiters are the hornbeams. Granted, these are dry fruits, and mostly yellowish-green, but many are nevertheless attractive.
